IDEATION PHASE

Define the Problem Statements

Date	24 October 2026	**Team ID**	TEAM-ITSM-04-SWUID2026171428
Project Name	Software Request Automation	**Maximum Marks**	2 Marks

Customer Problem Statement Framework:
A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your users face. Use this format to articulate root causes and emotional impact from the perspective of target personas.

ID	I am (Customer)	I'm trying to	But	Because	Makes me feel
PS-1	A corporate employee requiring licensed software for daily work deliverables	Request and get approval for software installation via standard IT catalog channels	It takes a long time and lacks visibility on approval or delivery status	Requests rely on back-and-forth emails and manual ticket routing without live tracking	**Frustrated, unproductive,** and blocked from meeting deadlines
PS-2	An IT Support / Software Asset Administrator	Validate license availability, route manager approvals, and fulfill software requests accurately	Manual verification is error-prone, creating audit compliance risks and backlog delays	Workflows lack centralized dynamic license availability checks and automated catalog routing	**Stressed, overwhelmed** by admin tasks, and exposed to audit risk
